Project Progress Report

Process updates #2
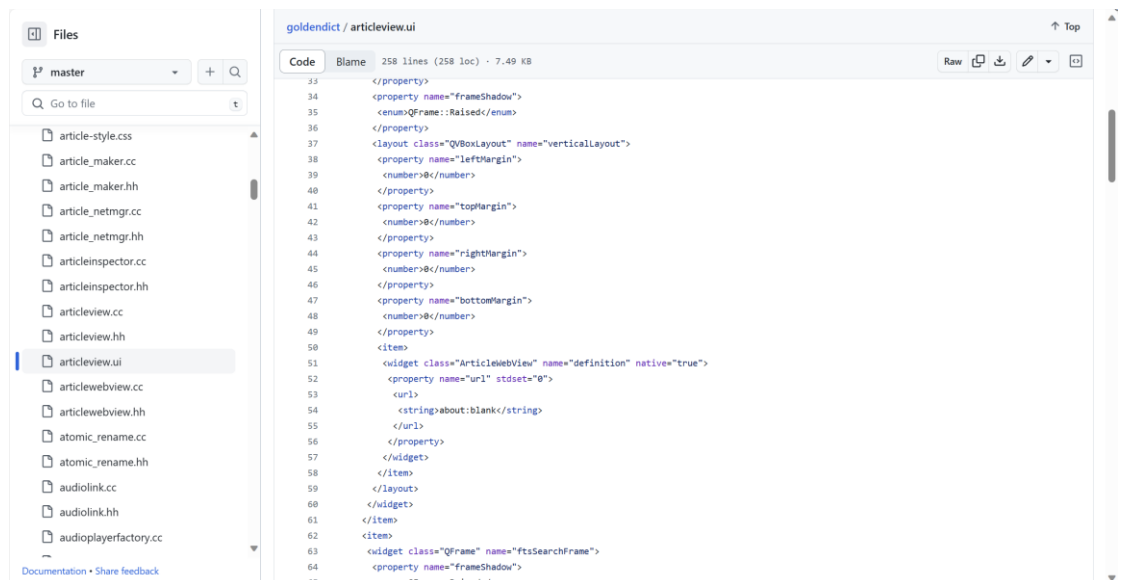

1. Project Information

Project Name: ABD Dictionary

Report Date: October 29th
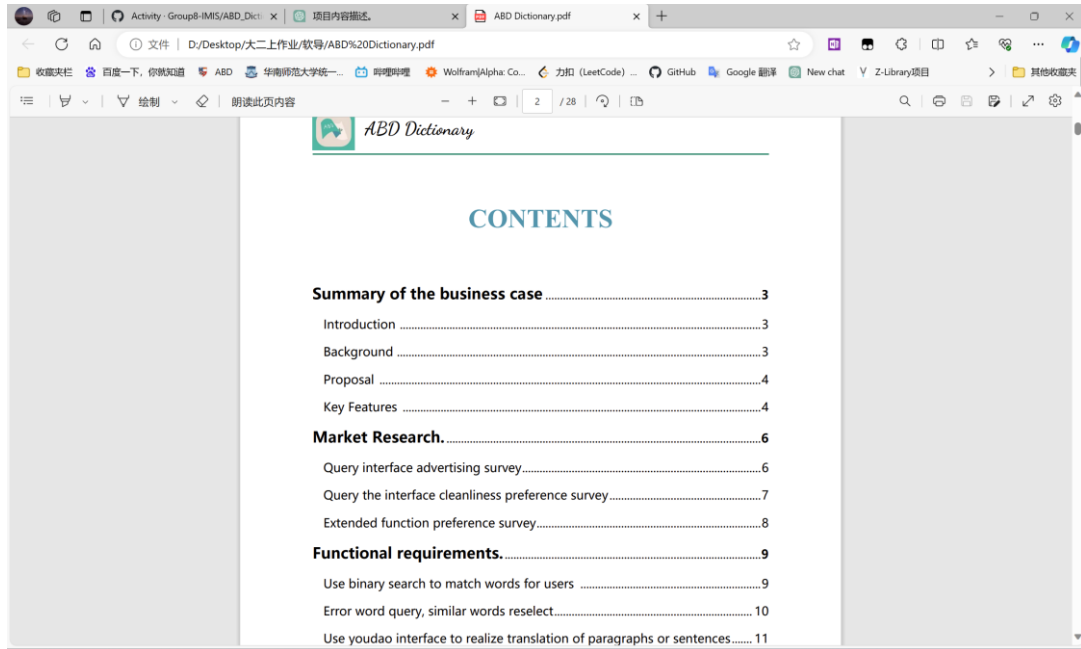

2. Current Project Status

**Progress overview**:

1. Logo design

2. Software core algorithm design

3. White paper writing
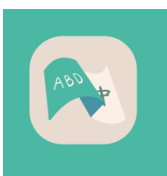

4. UI design

3. Completed Work
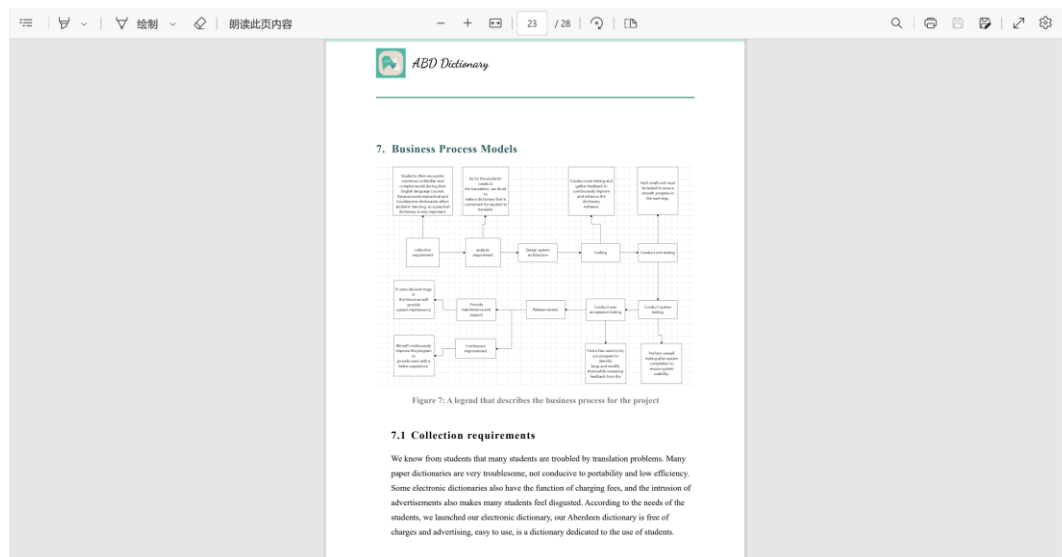

1. White paper writing

2. Logo design

4. Issues and Challenges

Description: While writing our software engineering white paper, we encountered difficulties in creating the required illustrations.

Impact: Lacking expertise in drawing UML diagrams, we found ourselves starting from scratch.

Solutions: To overcome this challenge, we extensively researched official documentation and familiarized ourselves with each type of UML diagram and its drawing conventions. Through this process, we successfully completed all the required illustrations.

5. Next steps

Our future plan for dictionary software interface development focus on the following aspects:

1. Emphasizing a clean and intuitive user interface design that allows users to find and access the desired words and definitions easily and quickly.

2. Introducing more multimedia elements, such as pronunciation, example sentences, and images, to provide richer and comprehensive vocabulary information.

3. Implementing intelligent search and prediction features that offer more accurate and personalized search results by learning user habits and context.
